Federal Communications Commission Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with manufacturer's instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Canadian Department of Communications Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

This class B digital apparatus complies with Canadian ICES-003.

2. About Hardware

2.1 Xonar Phoebus Audio Processing Card

No	Item	Description
1	Microphone Input Port	Connect your external PC microphone to this 3.5mm jack for voice input. Built-in high-quality Microphone pre-amplifier.
2	Headphone Output Port	Connect your headphones to this jack.
3	Box Link	Connect the Xonar Phoebus Control Box to this 2.5mm port.
4	Line Input Port	Connect analog devices like MP3 players, CD players, music synthesizers, and other line-level sound sources to this 3.5mm jack for audio recording or processing.
5	Front Output Port	For 2 channel speaker systems, connects to the front left / right input on the powered speakers.
6	Center/Subwoofer Out Port	Connect to the center / subwoofer input on 5.1/7.1 powered analog speakers.
7	Rear Output Port	Connect to the back surround input on 7.1 powered analog speakers.
8	S/PDIF Output / Side Out port	Digital output jack. Connect to an external digital decoder or digital speaker systems, Home Theater systems, AV receivers for outputting digital audio including PCM, Dolby Digital, DTS, WMA-Pro, etc. Connect to the surround channel input on 5.1 powered analog speakers.
9	Aux Input Header	4-pin header. Usually connects to the Analog Audio output of TV tuner card or other sound source inside your PC system. (To monitor your TV tuner card's audio from this Aux-In, you must enable the "monitor" function for Aux-In in the Xonar Audio Center software's recording mixer.)
10	S/PDIF Out Header	Connects to the graphics card with HDMI support.
11	Power connector	Connects to the 6-pin power cable of your power supply unit.
12	PCI Express Bus Golden Fingers	Inserts into the PCI Express slot on your motherboard.

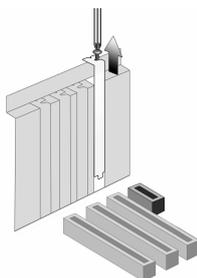

3. Installing the Xonar Hardware

3.1 Preparing Your Computer

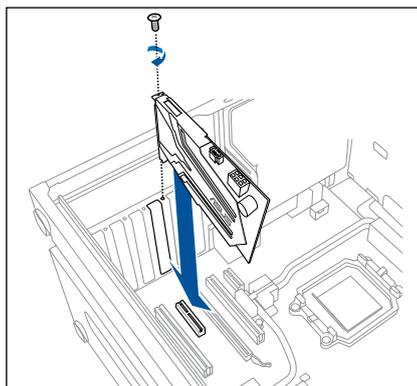

Before you proceed with the following installation steps, it's recommended that you disable your onboard audio device in your BIOS settings, or uninstall any other sound cards on your PC. (For BIOS setting or uninstallation of other sound cards, refer to the user manuals of your motherboard and sound card)

1. Power OFF the computer, the monitor, and all other peripheral devices connected to your computer.
2. Unplug the computer power cord from your computer and power outlet.
3. Touch the metal back or side panel of the computer to avoid static electricity.
4. Remove the chassis cover.
5. Remove the metal bracket from an available PCIE slot for the Xonar Phoebus audio card.

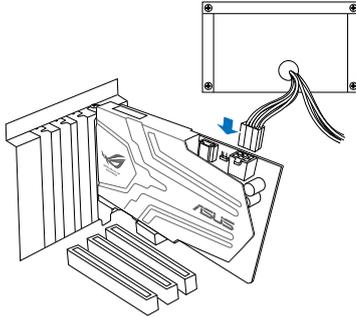

3.2 Installing the Audio Processing Card

1. Face the bracket of the Xonar Phoebus audio card toward the back panel of your computer and insert the audio card gently into an available PCI Express slot. Make sure it's completely inserted into the PCI Express slot. (Warning! Do not force the audio card into the slot. Make sure that the gold pins of the card's PCI Express connector are aligned with the motherboard's PCI Express connector before you insert the card into the PCI Express slot. If it does not fit properly, gently remove it and try again.)

2. Secure the audio card bracket to the back of your computer with the screw that you removed. Refer to section 3.1.
3. Connect the power cable of your power supply to the power connector on the Xonar Phoebus audio card.

The PCI Express high-quality audio card requires additional power from your computer. If the power cable is not connected properly, the audio card will not work at all.

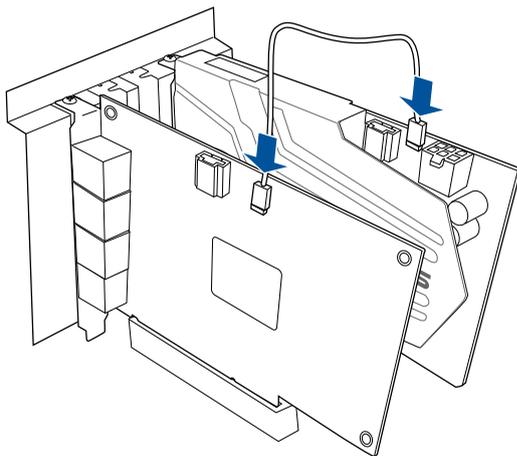

3.3 Connecting TV tuner card

If you have a traditional PCI or PCI Express TV tuner card on your PC, you may need to connect it to the audio card to send the tuner card's sound to your PC speakers.

1. Secure the PCI/PCI Express TV tuner card and screw it into the back-panel.
2. Connect the audio output header from the TV tuner card to the Aux-In header of the audio card, as shown in the figure below.

For optimum TV audio quality, Xonar uses ADC recording to digitize the signal and loops it back to DAC playback. Please select Aux-In as the recording source in the Xonar Audio Center's recording mixer and enable the monitoring button to pass this signal to the audio output. Using this setup, you can even turn on sound effects such as Pro-Logic IIx to expand the stereo TV audio to 5.1 or 7.1 channel surround sound. TV audio on your PC will become even better than on your TV set!

4.2.2 Reinstalling Software

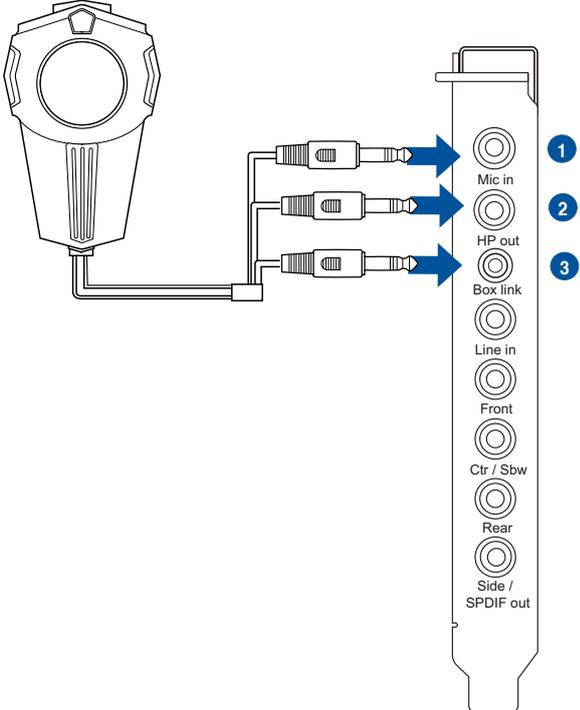

To reinstall the Xonar Phoebus card driver:

1. Before reinstalling any software, it's recommended to uninstall the existing software first.
2. After finishing the uninstallation of the software, please follow the installation process again to reinstall the same or updated software.

5. Connecting Speakers and Peripherals

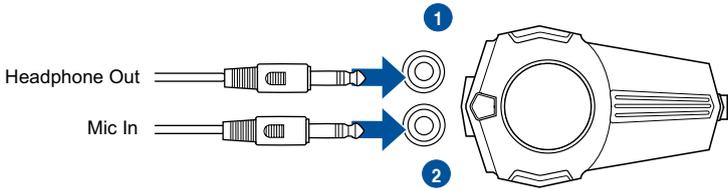

5.1 Connecting to Phoebus Control Box

7. Troubleshooting and FAQs

7.1 Troubleshooting

1: I cannot install the audio card driver in my PC.

Instructions:

- (1). Make sure that you have properly plugged the audio card into the PCI Express slot on your motherboard.
- (2). Check that the Windows hardware Device Manager has discovered a multimedia audio device. If no device is found, please try scanning for new hardware.
- (3). Try to restart your Windows.
- (4). Remove the card and plug it into another PCI Express slot.

2: I cannot find the Xonar Phoebus Audio Center.

Instructions:

- (1). Make sure you have installed the driver.
- (2). Find the Xonar Phoebus Audio Center icon in the system tray on the right bottom of the screen. Double click the icon to launch the Xonar Phoebus Audio Center utility.

- (3). If you cannot find the icon in the system tray, go to the Windows Control Panel and double click the "Xonar Phoebus Audio Center" icon to make it visible in the system tray again.
- (4). After the driver installation is complete, it's recommended that you reboot your computer to complete the setup. If the icon still doesn't appear, please try installing the driver package again.

3. I can't hear any sound from my analog speakers

Instructions:

- (1). The Xonar Phoebus PCI Express audio card needs the power cable to supply additional power in addition to the basic PCI Express bus power. Please double check you have plugged the small 6-pin power plug into the Xonar Phoebus power connector. If you did not plug the internal power, the Xonar Phoebus audio center will remind you a warning message and won't allow your operation when you double click the Xonar Phoebus audio center icon in the system tray.

- (2). Please ensure that you have connected speakers properly and have powered on your speakers.
- (3). Please ensure that the device master volume or the software player has NOT been muted on the Xonar Phoebus Audio Center.
- (4). If you are using Dolby Digital Live encoder through the S/PDIF output, the analog output will be muted to get rid of the interference between your digital speaker system and analog speakers or headphones. Please check if this is the case.
- (5). Please go to the sound and audio device of Windows Control Panel to check if the playback default device is set to Xonar Phoebus Audio Device, instead of other onboard AC97 or HDA codec device. If it's not, please set it to Xonar Phoebus Audio Device and restart your applications.
- (6). Please try restart your Windows.

4. I can't hear any sound from the S/PDIF output

Instructions:

- (1). Please ensure that you have enabled S/PDIF output in the Audio Center GUI (Main page).
- (2). Please ensure that you have connected the correct S/PDIF output jack in the card to the decoder's (AV receiver) S/PDIF input jack.
- (3). You may need to select the correct input and mode of your decoder or AV receiver. For Dolby Digital or DTS output, you may have to double check that the AV receiver is in that decoding mode.
- (4). If you are using 192KHz PCM output, please make sure that your decoder can support 192KHz decoding. Try changing it to 44.1K or 48KHz first.

5. I can't hear audio input (Mic, Line-in, AUX, etc.) from my speakers

Instructions:

- (1). Please select the correct input as the recording source. If you are using Windows Vista/Win 7, please also go to system audio control panel to see the current default recording/input device is right.
- (2). Please remember to turn on the digital monitoring button for that recording source.

6. I can't hear the TV tuner audio from my speakers

Instructions:

- (1). If you are using a traditional TV tuner card which has analog audio output, please connect it to the Aux-In header on the audio card

- (2). Select Aux as the recording source and remember to turn on the digital monitoring button in the recording mixer page.
- (3). If you are using a TV tuner card which has digital audio output instead of analog, please check that the sound is not muted and whether other applications can play normally. If you still have problem, please read the TV tuner card's software user guide.

7.2 FAQ

Q1: Does the Xonar Phoebus support Windows Vista / Win 7?

Answer:

Yes, the Xonar Phoebus driver package does support Windows Vista / Win 7 32/64 bit and most key features are available. In addition, the Xonar Phoebus supports unique GX on Windows Vista / Win 7, which can recover DirectSound 3D hardware and EAX gaming sound effects on Vista / Win 7 for a lot of existing DirectX games.

Q2: Why does the Xonar Phoebus support Dolby technology?

Answer:

Dolby is the ONLY brands and technology recognized by the CE industry and available on a wide range of audio equipment. The Xonar Phoebus includes these features to make your PC a powerful media and entertainment center.

Q3: Does the Xonar Phoebus support EAX on Vista / Win 7?

Answer:

Yes, The Xonar Phoebus can support EAX not only on Windows XP but also on Vista / Win 7 through innovative GX3.0 technology.

Q4: Why do I need Dolby for PC games?

Answer:

- (1). Dolby Headphone is available in the latest game consoles, like XBOX360, PS3, and Wii. Dolby can provide the best gaming sound experience and compatibility with home theater or TV systems.
- (2). Dolby Headphone is the best 3D sound positioning, spatial modeling and 5.1-channel virtualization technology for regular stereo headphones and speakers.

Q6: Will PCM sound output through S/PDIF be just 2 channels even with different analog output channels?

Answer:

The S/PDIF protocol specification (IEC-60958) can only carry 2-channel PCM data or non-PCM AC3/DTS data. So, when a user selects PCM output for S/PDIF, the Xonar Phoebus audio card will always deliver 2 channel PCM data through the S/PDIF output port. To attain the 5.1 channel surround sound, you can select DDO, which allows the Xonar Phoebus to deliver 5.1 surround sound for DVD movies, and even stereo music.
